

**ALL OUR ENERGIES.
SINCE 1956.**

The logo for Saet features a stylized icon on the left consisting of seven parallel diagonal lines of varying lengths, transitioning from dark blue to light green. To the right of this icon, the word "Saet" is written in a bold, sans-serif font. The letters "S" and "a" are dark blue, while "e" and "t" are light green. The background of the lower half of the page is white with a pattern of thin, light green concentric circles that overlap and create a sense of depth and movement.

Saet

About us

Innovation, Know-How and Experience Since 1956.

SAET is an Italian company operating internationally that offers solutions for high-voltage electrical grid, electrochemical storage systems and custom solutions (Operation & Maintenance, after-sales service, automation, weighing systems). It has always operated in the name of technological diversification and a strong commitment to innovation, thanks also to the prestigious collaboration with the University of Padua. The world around us is constantly changing and SAET has always been evolving. A history marked by key moments.

1956-1992

SAET was founded in 1956 as an electromechanical company. At the end of the 1980s it became part of the Techint Group, which gave it its working method, its ability to handle and deliver turnkey projects, and its international vision.

1992-2005

In 1993 SAET underwent a management buyout, whereby its leaders are now some of the shareholders and have technical and managerial responsibility for the company.

2005-2011

Since 2005, integrating power, protection and control, SAET has started to build several turnkey High Voltage Stations up to 500kV, offering the complete package with civil works included, in Italy and abroad.

2012-Today

In 2021 SAET became part of Renantis SpA (previously Falck Renewables group), which controls 60% of the company. Operationally it is part of the Next Solutions division.

SAET plays an important role in the energy transition, for a more sustainable, modern and future-oriented world for the younger generations.

What we Do

**Sustainability, flexibility,
professionalism
and transversal skills
are SAET's strong points,
in Italy and abroad.**

SAET can offer complete solutions for high voltage connections up to 500 kV, to private and public users, for transmission and distribution grids on an international scale. SAET can deliver turnkey solutions, which involve a complete service: starting from engineering to construction and commissioning, with supply of all the necessary equipment, and developing protection and control systems according to specific needs.

From consulting to turnkey solutions.

SAET is a reliable and flexible partner for all connection needs and plays a fundamental role in the energy transition, connecting renewable and non-renewable power stations. Thanks to the experience it gained over the last decade it is able to offer Energy Storage solutions, integrating technologically advanced components for the best energy management performance.

SAET's role in the Energy Transition.

Constant technological growth enables the company to also offer industrial automation systems and the construction of medium/large-scale renewable power stations.

The company handles Engineering, Procurement & Construction, and after-sales services such as Operation & Maintenance, technical consultancy and software solutions, in line with the current business directions and with a view to developing and expanding the offer to support the needs of its customers.

A complete and flexible service.

Consolidated experience, constant technological development, and reliability demonstrated over time, have made SAET a leading company in power generation, transmission and distribution systems and stations for Transmission Operators (TSO), Energy Producers/Distributors (DSO), Utilities, and industrial plants both in Italy and abroad.

Today, SAET is a reliable Engineering, Procurement & Construction (EPC) Contractor with strong worldwide experience and dedicated know-how offering turnkey solutions in compliance with all grid codes and standards, and operating according to energy efficiency, service continuity and safety criteria. From the analysis of the request, to the feasibility study, design, installation, commissioning, delivery, training and subsequent maintenance activities, SAET aims to meet the needs of its customers by providing the best

Connecting power stations to the national grid means knowing how to operate to high standards and with defined grid protocols. Customers who have chosen SAET have benefited from the experience, expertise, reliability and flexibility that SAET can guarantee.

Energy Storage

SAET realizes electrochemical storage systems, whether standalone or associated to other plants (renewables, industrial, etc.). It operates as an EPC Contractor for the supply of turnkey systems at international scale.

SAET has been a pioneer in the provision of energy storage solutions. SAET presented itself as EPC Contractor for the supply of turnkey plants, or as a system integrator in collaboration with the leading battery manufacturers in the international field; in this way, the company has consolidated its **know-how on different battery technologies** (lithium, sodium, flux) and built significant contacts to be competitive on the market, offering flexible and reliable solutions to customers.

SAET is now present on the international Energy Storage market providing turnkey systems of various sizes, following the project from the initial steps (**feasibility study and cost-benefit analysis**), to the definition of the **sizing** and of the **optimal energy/power ratio**, up to the detailed design and optimisation of the storage system performance.

This is followed by the procurement of components and their assembly, on-site installation of the system, and commissioning. The offer is completed **by Operation & Maintenance** services and remote control of the system.

In the energy transition SAET has been a pioneer in the construction of storage systems, with over 10 years of experience and using multiple technologies. Customers who have chosen SAET have been able to count on the expertise of a partner who knows the market and can offer the best performance in energy management.

Custom Solutions

The experts of SAET's Custom Solutions area handle plant operation and maintenance services (Operation & Maintenance), automation, and special industrial or exploratory systems (Weighing and Dosing Systems).

Operation and Maintenance

SAET's experience includes highly qualified Operation and Maintenance (O&M) activities: high voltage substations, storage systems with **real time monitoring**, **24/7** remote assistance and control, maintenance strategy and development of plans that include preventive and predictive maintenance in combination with extraordinary and corrective maintenance.

Our transversal skills in the automation and weighing systems enable us to provide effective assistance and maintenance service that ensures continuous system availability. Customers who have chosen SAET have chosen an all-round, solid partner that can support them around the clock and across the board.

Automation

SAET operates on two levels of process automation, which can be integrated with each other: the **basic automation** is dedicated to the control systems that carry out all the sequences, interlocks and adjustments towards the field and the **integrated supervision** of the system through the operator interface functions.

Weighing and Dosing Systems

A single, reliable partner for turnkey systems, in all phases of plant development and implementation. SAET aims at the process plant market as a turnkey supplier of **solid material handling package plants**, where it integrates its proprietary industrial dosing and weighing technologies with the mechanical, electrical, plant engineering and automation skills acquired and consolidated in more than 50 years' experience with process plants in the main industrial sectors.

SAET can supply from the simplest Weighing and Dosing Systems (mechanical components and electrical/electronic instrumentation) to the most complete and complex process automation and recipe control systems.
